

# Linking Financial Data Sets: Possible Problems and Solutions

Sept. 30, 2014

Kathleen Dreyer, Columbia University Todd Hines, Princeton University

#### **Using financial data**

Very common occurrence

- Financial data comes from multiple sources
- Another very common occurrence
  - The different sources use different identifiers

In order to link/merge the data together, common identifiers are required.

#### **Identifiers**

Identifiers used to match data sets: (ranked from less precise to more precise)

- 1. Name or ticker
- 2. CUSIP
  - a. SEDOL or ISIN for non-US companies
- 3. Unique id, e.g. GVKEY, PERMNO

# **Examples of financial data**

NEW YORK -- Hillshire Brands Inc. gained on its debut on the New York Stock Exchange Friday after emerging from Sara Lee Corp.

The new company, which trades under the ticker "HSH," focuses on meat brands such as Jimmy Dean, Ball Park and its namesake Hillshire Farm, which Sara Lee acquired in 1971. It also sells Sara Lee frozen desserts and bakery products.

The other company created after Sara Lee's split in two is an international coffee and tea seller called D.E. Master Blenders 1753, a reference to one of the company's coffee brands. It is based in the Netherlands and will trade on an exchange there.

Hillshire says the spinoff will let it focus on developing meat products that appeal to changing tastes.

#### **Difficulties with CUSIP**

- Dell changed their name in July 2003 from Dell Computer Corp to Dell Inc.
- The ticker remained DELL but the CUSIP changed
- Before name change CUSIP was 24702510
- After name change (from 7/22/03) it was 24702R10

- CUSIPs have only existed since the late 1960s.
  - Can't use to match for earlier data

## **Examples of unique identifiers**

# Let's try an example!

A researcher would like to examine the effectiveness of a merger.

What data do we need?

#### **Effectiveness of mergers**

- To analyze, we'll need
  - Merger data (acquiror, target company, deal size, deal dates, etc.)
  - Stock price information
    - Did the deal have a positive effect on the acquirer's stock price?
  - Fundamentals (financial statement) information
    - Analyze the financials of the acquiror both and after the deal

### Matching example

Unfortunately, all these variables come from different databases. Fun!

#### Some common databases for:

- M&A data -- SDC Platinum (a.k.a. Thomson ONE), Zephyr
- Stock price CRSP (US stock prices)
- Fundamentals (financial statement data) Compustat North America (US company fundamentals)

#### Sara Lee (Hillshire Brands) - company history

#### Why is it important we did this?

- We would have thought the SDC M&A deals were for three completely different companies:
  - Hillshire Farms
  - Sara Lee
  - Consolidated Food Corp

 All three have different names, different CUSIPs, different tickers

#### Will this solve all your problems?

- Most companies will "match" if you use permanent identifiers, but there still can be problems
  - There is a lot of financial engineering now spinoffs, tracking stocks, complicated merger deals, etc. Sometimes the researcher will need to read up on the specifics of a deal in order to match it correctly.

#### **Matching CRSP to Compustat**

- A very common problem is to need to match CRSP stock data to Compustat fundamentals (financial statement) data
- Problem
  - Compustat has a "unique identifier" GVKEY
  - But the other company identifiers (name, CUSIP) are what is called "header data"
    - Only the most recent value (name, CUSIP) is available in Compustat

#### Matching CRSP to Compustat (cont.)

- For Hillshire Farms (f.n.a. Sara Lee) this means that only the most recent company name (Hillshire Farms) and most recent CUSIP (the one starting with 432589) is in the Compustat record.
- There is a subscription database called CRSP/Compustat merged.
  - If you have a GVKEY, you can use the database to get the Permno. And vice versa.
- Most institutions don't have a subscription, so you have to do the matching yourself

# Compustat Record

<u>GVKEY</u>	FIRST_DATE	LAST_DATE	COMPANY_NAME	TICKER	CUSIP_FULL
9411	1/1/1950	12/31/2013	HILLSHIRE BRANDS CO	HSH	432589109

#### **Matching CRSP to Compustat**

As when we were matching the SDC data, having access to the CRSP file, which details all company names, tickers and CUSIP numbers used, will allow us to match.

#### How researchers do matching

- Researchers seldom look at one company at a time
- Usually are looking at hundreds or thousands of companies and deals
- This means they'll generally use statistical software such as Stata, SAS, R, etc. to work with the data
  - This software allows researchers to write programs that will follow the same matching rules that we just performed for one company, Hillshire Farms (Sara Lee), but for many companies at once.
