THE WEEK'S HIGHLIGHTS:

- The consumer price index (CPI) was unchanged in June—the second straight month of no change. Nevertheless, April's 0.7 percent gain caused the CPI to increase at a 3.5 percent annual rate during the second quarter, the largest rise in three years. Measured from four quarters earlier, the CPI is up 2.1 percent.
- Prices for finished goods at the producer level (PPI) fell 0.9 percent at an annual rate in June. But with the PPI rising at a 3.7 percent rate between March and May, producer prices rose at a 2.6 percent rate in the second quarter, the sharpest rise in 2½ years.
- Total business inventories increased \$3.4 billion in May, or 0.3 percent. At the same time, total business sales rose 1.2 percent. Accordingly, the business inventory-to-sales ratio fell to 1.34 in May, its lowest level in nearly 49 years.
- The current dollar value of sales at the nation's retailers in June rose 0.1 percent. Boosted by appreciable gains in April and May, however, retail sales rose 1.9 percent during the second quarter, or at a 7.9 percent annual rate. By contrast, retail sales grew at a 14.5 percent rate during the first quarter.
- Following gains of 0.8 percent in May and 1.1 percent in April, the index of U.S. import prices fell 0.2 percent in June. Measured from a year earlier, import prices have dipped 0.2 percent, quite a contrast from the 5.7 percent decline seen between June 1997 and June 1998.

Adjusted Monetary Base

The adjusted monetary base is the sum of Federal Reserve deposits and vault cash held by domestic depository institutions, currency held by the public, and an adjustment for the effect of changes in reserve requirement ratios. The monetary base series includes Federal Reserve deposits used to satisfy clearing balance contracts. Data are computed by this bank. A detailed description of the adjusted monetary base is available from this bank. Recent data are preliminary.
